body

The screenshot displays the 'Classification App' interface. On the left, a metadata box shows: 'Location: Oriskany, Russia', 'Latitude: 54.138', 'Longitude: 75.579', and 'Date: 2018-09-11'. The main view shows a satellite image of a lake with a blue square highlighting a specific area. A zoomed-in view of this area is shown on the right. The interface includes a 'Water-body layer' control with a 'Classifier' set to 'Water' and a 'Color swatch' slider. The bottom of the interface features a 'SENTINEL HUB' logo and a row of color swatches.

eo-learn: collection of modular Python sub-packages that allow processing of spatio-temporal data to prototype/build/automate large scale EO workflows. Operates on AOIs of any size

EOPatch: stores multi-temporal imaging and non-imaging data in Numpy and Shapely format

EOTask: performs a specific operation on EOPatch instances. Easily customisable

EOWorkflow: acyclic graph of EOTasks to form complete EO pipelines with logging/monitoring

Sentinel-2 MSI affected by clouds. Tile-based cloud coverage not suitable for AOI analysis

Developed a Machine Learning model for cloud masking of single-scene S-2 L1C images

TRAINING/X-VAL:
MAJA multi-temporal
cloud masks

MODEL:
LightGBM
+ Fast
+ Accurate
- Pixel-based

TESTING:
Hollstein *et al.*

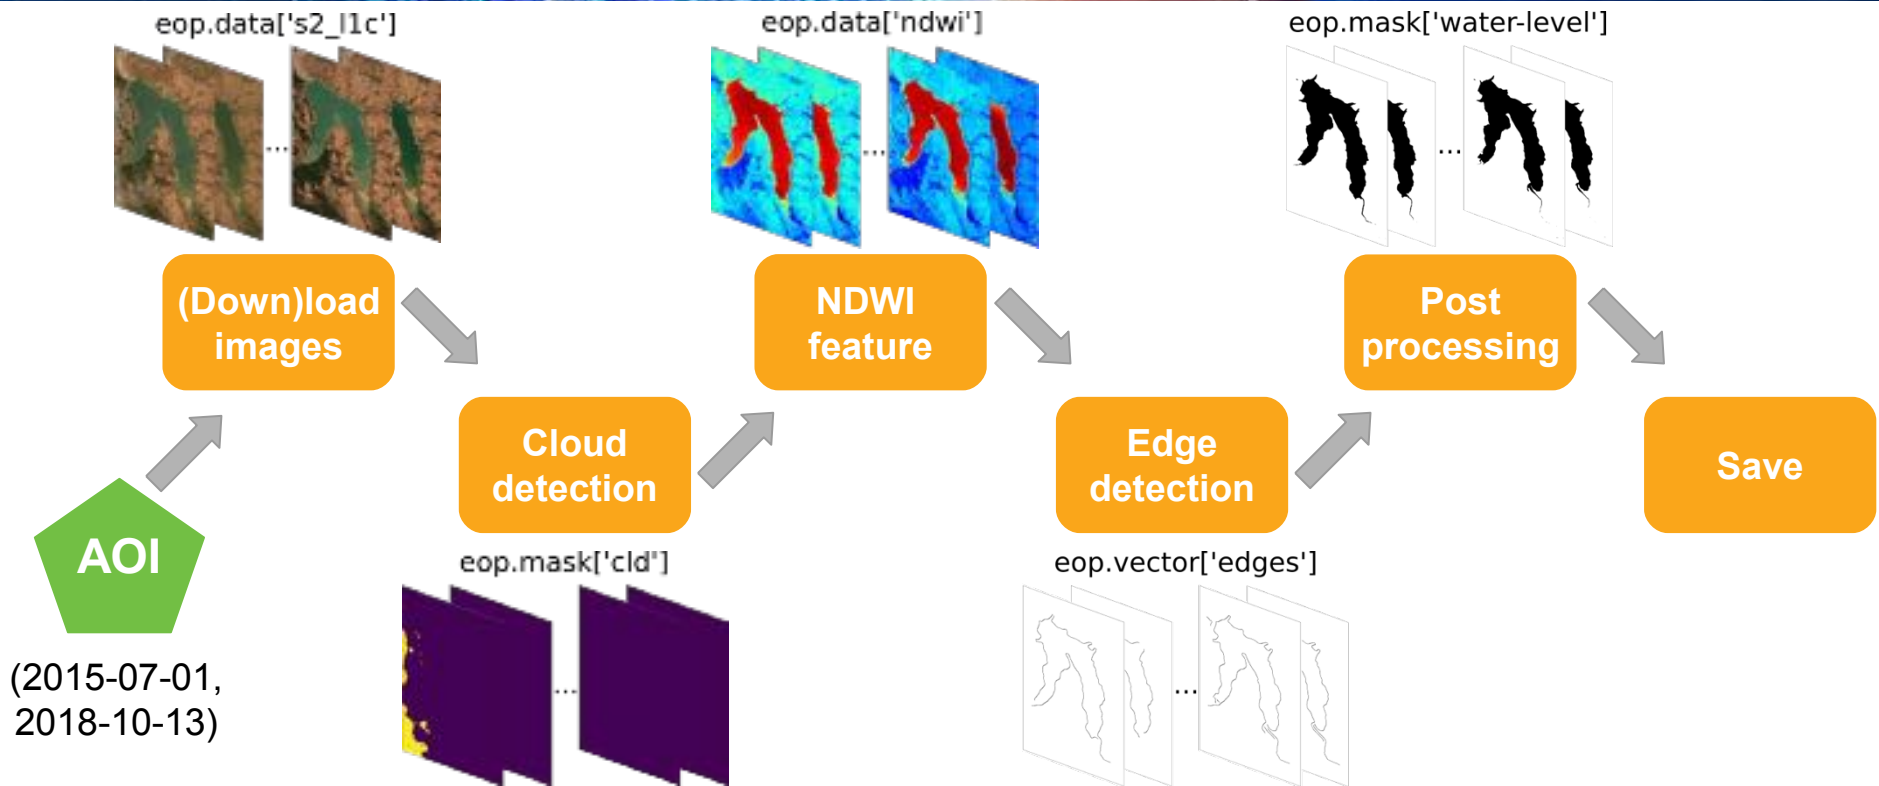

Fraction of classifications as clouds

	Fmask	Sen2Cor	Sentinel Hub
Cloud	89.0%	97.5%	99.4%
Cirrus	88.3%	87.7%	83.8%
Land	7.2%	5.7%	2.2%
Water	2.0%	0.0%	0.1%
Snow	39.2%	30.7%	13.5%
Shadow	3.9%	3.9%	5.8%

Packaged as a stand-alone Python package [s2cloudless](#) for on-the-fly cloud masking

You can read all about the cloud detector on [this](#) blog post.

Global Water-level Monitoring Workflow

AI4EO applications require more than (EO) data and (AI) models

Tools to handle spatio-temporal data and infrastructure to support the workflow are needed

We provide open-source tools to make creation of AI4EO applications easy and accessible

Come talk to us:

- Tuesday, 17:30–19:00, Tent, Sentinel Hub—where are the limits to on-the-fly processing? (*G. Milčinski*)
- Wednesday, 14:00–17:30, James Cook, Earth on AWS (*G. Milčinski*)
- Wednesday, 18:00–19:00, Tent, Open-Source Earth Observation Research Framework for Python (*M. Aleksandrov*)
- Thursday, 16:00, New Space Economy, Big Hall, Building the company without having an Exit in mind (*G. Milčinski*)
- Friday, 9:45, Research Infrastructures & Platforms, Magellan, Perceptive Sentinel—Big Data Knowledge Extraction and Re-creation Platform (*A. Zupanc*)
