Urban Heat Islands (UHI)

A satellite image of an urban area, likely Los Angeles, showing a prominent Urban Heat Island (UHI) effect. The city center is a bright, yellowish-white area, indicating high temperatures. This is surrounded by a ring of green, representing vegetation and cooler temperatures. The surrounding rural and suburban areas are shown in shades of blue and purple, indicating lower temperatures. The image is a false-color composite used to visualize temperature variations.

Source: NASA

POLIS

POLIS focuses on the impacts of the excess heat of urban areas (The Urban Heat Island Effect)

POLIS exploitation plan will take advantage of unprecedented **spatially and temporally detailed** urban temperatures to support applications on thermal discomfort, any outdoor activity, smart cities, energy demand and health.

The data will be available in near real-time. | They will offer high spatial and temporal resolution. | They will be available online. | They will be generated for numerous cities around the Globe.

DATA PRODUCTS

Surface Temp. Air Temp.

Temperature Data

Cooling Degrees

Energy Demand Index

HUMIDEX

T Apparent

Thermal Discomfort Indices

Heatwave Hazard

Can enable the development of numerous applications

 FITNESS / SPORTS

SMART CITIES

HUMAN HEALTH

CIVIL PROTECTION

 ENERGY DEMAND

NEAR REAL-TIME DATA PRODUCTS

LST

The skin temperature of the surface. Closely related to the surface energy balance.

LSE

The land surface emissivity is an intrinsic property of land surfaces

TA

The air temperature at 2 m above ground. Drives the heat transfer process of the human body.

Cooling Degrees

The difference between TA and a threshold above which people use air-conditioning to sustain the indoor temperature to comfortable levels.

Therma Indices

Indices that quantify peoples' discomfort due to temperature and humidity.

Heatwave Hazard

TA discrepancy from a city specific threshold above which a day is considered **Hot**.

ACPs

The Annual Cycle Parameters can be used for mapping the urban thermal landscape

APPS

Indicative Apps for cubesat constellation.

PERSONALIZED HEATWAVE RISK ESTIMATOR

URBAN Heat Fluxes and Emissions

OUTDOOR Activities

Current UHI data acquisition

	Spatial Resolution	Temporal Resolution	Real time	Operational use	Coverage
Geostationary	4-5km	5-15'	Yes	Yes	Earth disc
Current Polar orbiters	60m - 1km	12 hr - 2wk	No	No	Several km (path)
Global Models	25km	1 hr	NA	Yes	Global
Weather stations	Point (n/a)	10'	Yes	Yes	Point

- **LEO mission**
- **Inclination: 98.7° (for the tech demo)**
- **Sun Synchronous (for the tech demo)**
- **Altitude: 450 - 550km**

- **12 satellites constellation**
- **1h of revisit time**

3U Cubesat

15W Power

4x LWIR COTS imagers (2 bands)

ADCS ($\pm 27^\circ$ pointing)

COMMS (S-Band)

EPS

Ground Sample Distance (nadir @ 450km)	120m
Swath width (@ 450km)	146.7km
Pointing capability	± 27°
Accessible Swath (@ 450km)	934km

POLIS vs Current UHI data acquisition

	Spatial Resolution	Temporal Resolution	Real time	Operational use	Coverage
Geostationary	4-5km	5-15'	Yes	Yes	Earth disc
Current Polar orbiters	60m - 1km	2 wk -12 hr	No	No	Several km (path)
Global Models	25km	1 hr	NA	Yes	Global
Weather stations	Point (n/a)	10'	Yes	Yes	Point
POLIS IOD	140m	10 hr	Yes	Yes	50 major urban areas
POLIS Constellation	140m (70m SR)	1-2 hr	Yes	Yes	All major urban areas
